Telecon with Dr Stevens

Dr Stevens called this afternoon to learn if you had reviewed my memorandum. I advised him that we had a conference and that since his approach was a significant deviation of our original plan, we would have to obtain approval from the Board of Advisors and the New Land Association to proceed. To proceed we would need a proposal in writing which could be presented to the groups. At this point he indicated that he would have to withdraw since he did not desire a continual confrontation.

He also indicated that he had what he considered a better situation in Princeton Pa for correction of the green house.

It was decided that we would part as friends. However, this parting would have no effect on Marc Dworkin continuing to work with us relative to the laboratory.

He also requested that we not divulge any information Marc gave us relative to his electrical power generating system.
